

System 4 Remote View System Requirements

Minimum System Requirements:

Remote System:

1. Windows 95/98/NT/2000
2. Pentium 166 (recommended 233MMX)
3. 32MB RAM (recommended 64MB RAM)
4. 20MB free hard drive space for application
5. 4GB plus free hard drive space for users planning to record video on local machine
6. 10/100 MBit Ether Net Card
7. Connectivity to LAN that the S4SVR is connected with

System 4 Server (S4SVR)

1. Connection to LAN (10/100MBit connection) (LAN card provided with unit)

**Note: the S4SVR can limit bandwidth usage by the remote user (per user). This will help LAN users maintain the integrity of their LAN under multi-user simultaneous connections. Bandwidth usage is less when using the S4SVR remote viewer application to review recorded video only. Live viewing of video across LAN requires additional bandwidth if the user is not limited by the software.
